

 EXECUTIVE HOSPITAL BRIEFING

The Clinical Triage & Patient Engagement Operating System

Empowering hospital OB-GYNs with 90-second outpatient clinical triage while unlocking active maternal engagement, hospital service cross-sell, and continuous delivery retention.

The Unstructured Gap in Modern Outpatient Maternity

While leading maternity hospital chains provide world-class labor wards, care between scheduled visits is fragmented and stressful.

OVERHEAD

Chaotic WhatsApp Queries

Doctors and duty nurses are overwhelmed with late-night text messages and subjective symptoms lacking structure.

- Panicked 2 AM Braxton Hicks messages
- Blurry photos of lab tests and scans
- Physician communication burnout

73% of OB-GYNs report after-hours communication fatigue

EFFICIENCY

The 5-Minute Consultation Drain

Doctors lose up to 40% of consultation time deciphering handwritten diaries and piecing past vitals together.

- Hunting through physical paper records
- Asking repetitive kick count questions
- Less time for physical exam and reassurance

4-6m lost per appointment on administrative triage

CLINICAL SAFETY

Delayed High-Risk Flags

Preeclampsia spikes and fetal movement decelerations escalate unnoticed between prenatal clinic appointments.

- Silent BP elevation ($\geq 140/90$ mmHg)
- Unreported fetal kick deceleration
- Preventable emergency room visits

Top 3 cause of maternal emergency room admissions

REVENUE LOSS

Patient Churn & Leaked Retail

Mothers lose active connection with the hospital brand and spend thousands on outside pharmacy and retail.

- Weak brand engagement between visits
- Pharmacy and lab leakages to competitors
- High customer acquisition cost (CAC)

35% of booked patients explore competing delivery suites

The Solution: The OPIN Dual-Platform Ecosystem

Connecting expectant mothers with their hospital obstetrician through seamless outpatient logging and 90-second clinical triage.

PATIENT EXPERIENCE

FOR EXPECTANT MOTHERS

The Daily Maternal Companion App

Calming, reassuring mobile web app that keeps mothers engaged every single day of their pregnancy journey.

- ✓ **Daily Kick Counter**
Formal Cardiff count-to-10 kick sessions with automated movement duration logging.
- ✓ **Clinical 5-1-1 Contraction Timer**
Calculates contraction intervals and accurately filters false labor from true labor.
- ✓ **Indian Nutrition & Food Safety Scanner**
AI-powered safety validation for local foods (dal, papaya, spices, street snacks).
- ✓ **Hospital Services & Retail Store**
Direct booking for hospital antenatal classes and delivery bag essentials.

CLINICAL WORKFLOW

FOR HOSPITAL OB-GYNs

The 90-Second Clinical Triage Portal

Engineered strictly for obstetricians to review complete outpatient vitals and red flags in under 90 seconds.

- ✓ **Automated Urgency Triage Roster**
Patients auto-stratified into High Alert, Watch List, and Routine gestational care.
- ✓ **Longitudinal BP & Weight Velocity**
Instant visual graphs highlighting pre-eclampsia thresholds (BP $\geq$ 140/90 mmHg).
- ✓ **Fetal Movement Anomaly Alerts**
Immediate proactive flags when a patient records decelerating kick activity.
- ✓ **1-Click HL7 / FHIR R4 Export**
One-click transfer to hospital EHR systems or instant printable clinical PDF summaries.

Deep Dive: The 90-Second Clinical Triage Portal

Engineered specifically for busy outpatient OPDs — doctors review complete maternal status in seconds.

High Alert: Immediate Clinical Outreach

Automated clinical flag triggered when Blood Pressure $\geq 140/90$ mmHg, fetal kicks < 10 in 2 hours, or active 5–1–1 contraction signals are recorded.

Watch List: Enhanced Monitoring

Patients approaching term (≥ 38 weeks), high-risk gestations (IVF, twins, GDM), or patients who have missed consecutive vital logs.

Routine: Normal Gestational Progression

Vitals, kick sessions, and maternal weight velocity tracking steadily within expected clinical reference ranges.

Priya Sharma (31w + 2d)

Gravida 2, Para 1 • EDD: 18 Nov 2026

BP ELEVATED

Latest Blood Pressure	142 / 92 mmHg (Today, 08:30 AM)
Fetal Kick Session	10 kicks in 38 mins (Healthy Cardiff)
Contraction Status	Braxton Hicks (Irregular, 25m interval)
Maternal Weight Velocity	+0.45 kg / week (Within target)
High-Risk Tagging	Advanced Maternal Age (36), Gestational HTN

Proactive Outpatient Monitoring vs. Current Standard

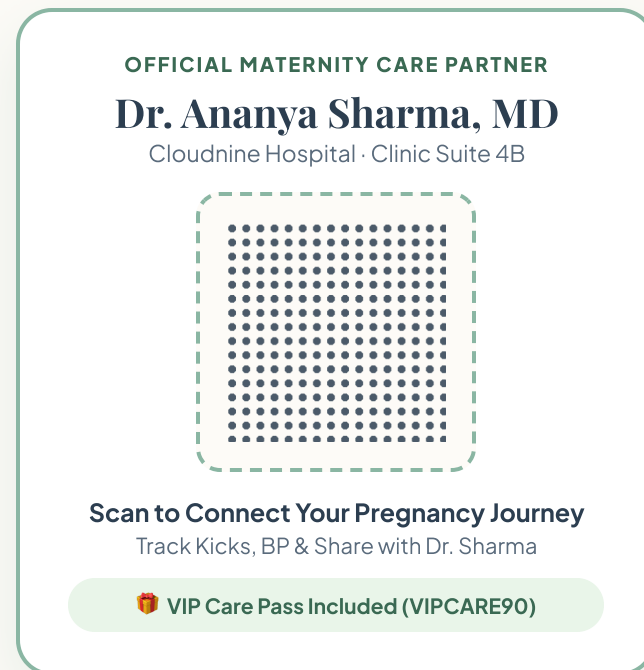

Transforming maternal care from reactive emergency admissions to proactive clinical surveillance.

Clinical Scenario	Current Standard Practice	With OPIN Enterprise Platform
Pre-eclampsia Early Warning	Blood pressure is only checked during bi-weekly or monthly clinic appointments; early spikes are often caught late.	Patients log home BP on their phone; portal instantly flags readings $\geq 140/90$ mmHg for proactive clinic outreach.
Fetal Movement Deceleration	Relies on retrospective patient recollection: <i>"Baby felt quiet yesterday or the day before."</i>	Cardiff count-to-10 kick sessions logged with timestamps; alerts generated if session exceeds 2 hours.
Labor Triage Overhead	Panicked midnight calls to on-call doctors and duty nurses for benign Braxton Hicks contractions.	Offline contraction timer applies the clinical 5-1-1 rule before directing the patient to the hospital labor ward.
Clinical Documentation	Doctors manually transcribe patient logs or transcribe notes from phone messages into the hospital EHR.	1-Click FHIR R4 JSON export or printable PDF summary directly imports into hospital information systems.

Zero IT Friction: Deployed in Under 5 Minutes

No server installations, no software downloads, and no IT department tickets required.

1

Place Standee on Consultation Desk

OPIN delivers ready-to-use acrylic QR desk stands personalized for each obstetrician and OPD counter.

2

Patient Scans with Smartphone

Instant onboarding via smartphone camera. Patient grants explicit consent to link her vitals to the doctor.

3

Doctor Opens Portal on Clinic Browser

Access the triage dashboard instantly on any desktop, laptop, or clinic iPad with secure single sign-on.

Monetization: Hospital Services, Brand Ads & Retail

Unlocking continuous ancillary revenue across the complete 40-week maternal care journey.

HOSPITAL SERVICES

In-House Hospital Cross-Sell

Promote high-margin hospital offerings directly inside the patient companion app:

- Antenatal & Lamaze fitness classes
- Certified lactation consultations
- Stem cell & cord blood banking
- Executive birthing suite upgrades

+25% ancillary hospital service uptake per patient

PHARMACY TIE-UP

Hospital Pharmacy Refills

Keep recurring pharmaceutical spend inside the hospital network with 1-click home refills:

- Prescribed prenatal vitamin packs
- Iron & calcium supplement courses
- Blood glucose monitoring strips
- Direct delivery from hospital pharmacy

₹1,800 average monthly prescription retention

BRAND PARTNERSHIPS

Curated Brand Ads

Contextual, high-quality brand sponsorships tailored to the expectant mother's gestational stage:

- Organic maternal nutrition & dairy
- Premium strollers & car safety seats
- Non-toxic baby nursery furniture
- Strictly vetted brand partners

₹45 high-yield monthly CPM/CPC value

E-COMMERCE

In-App Maternity Store

Integrated online store for essential physical pregnancy and postpartum recovery products:

- Pre-packed Hospital Labor Bags
- Postpartum care & recovery kits
- Nursing wear & modern breast pumps
- Direct hospital bed delivery option

₹6,500 average basket size for labor bag kits

Patient Data Sovereignty & Indian Regulatory Standards

Engineered to exceed Indian data protection requirements and medical compliance mandates.

LEGISLATION

DPDP Act 2023

Built in strict alignment with India's Digital Personal Data Protection Act. Explicit consent capture, full audit trails, and patient right-to-erasure built-in.

- Granular consent protocols
- Verifiable audit access logs
- Instant patient data deletion

PCPNDT STRICT

PCPNDT Adherence

Zero prenatal gender prediction, indexing, or detection features. Complies unconditionally with all Pre-Conception & Pre-Natal Diagnostic Techniques regulations.

- Strictly vetted content rules
- Zero fetal gender indexing
- Indian statutory compliance

DATA INTEGRITY

No Vitals Brokering

A permanent structural firewall separates medical vitals (BP, kick counts, scans) from commercial promotions. Clinical health records are never sold to external ad brokers.

- Medical records stay private
- Zero data trading or auctions
- Institutional trust protected

SECURITY

Local-First Storage

Maternal tracking records live in the user's secure browser database (IndexedDB) and transfer directly to the doctor's dashboard via encrypted SSL clinical tunnels.

- Browser IndexedDB encryption
- End-to-end SSL clinical tunnels
- Zero server liability for hospital

Turnkey 90-Day Enterprise Pilot Roadmap

A phased, low-risk pilot across 1–2 flagship units with dedicated onboarding and analytics support.

PHASE 1

WEEKS 1 – 2

Setup & Clinic Provisioning

Deploy personalized clinic desk QR standees and train participating OB-GYNs and nursing staff.

- Select 1–2 flagship hospital centers (e.g. Cloudnine Old Airport Rd / Motherhood Indiranagar)
- Deliver branded acrylic QR kits to 10 key obstetricians
- 15-minute briefing session with OPD desk & duty nurses

PHASE 2

WEEKS 3 – 10

Clinical Outpatient Rollout

Active patient onboarding and daily doctor triage utilization during regular OPD consultations.

- Expectant mothers onboarded at prenatal checkups
- Obstetricians use 90-sec triage dashboard daily
- Activate in-app hospital class and pharmacy links

PHASE 3

WEEKS 11 – 12

Audit & Network Expansion

Evaluate clinical time savings, nurse query reductions, and finalize network-wide roll-out terms.

- Measure consultation time saved and alert accuracy
- Review patient engagement and hospital service retention
- Sign enterprise contract across remaining branches

Measurable Impact Across Hospital Leadership

Aligning clinical safety, operational efficiency, and commercial profitability for hospital leadership.

CLINICAL GOVERNANCE

Chief Medical Officer

Earlier detection of pre-eclampsia (BP $\geq$ 140/90) and fetal decelerations reduces adverse perinatal events.

- Early warning detection
- Standardized clinical audit trails

< **90S** triage overview per patient

PHYSICIAN SATISFACTION

Consulting OB-GYNs

Cuts administrative review from 5 minutes to seconds. Eliminates constant 2 AM WhatsApp anxiety.

- Zero messy WhatsApp photos
- More physical examination time

-70% time spent hunting past vitals

OPERATIONAL RELIEF

Nursing & Duty Team

Automated 5-1-1 contraction guidance educates mothers on false vs. true labor, reducing midnight calls.

- Filters false labor calls
- Relieves night-shift burden

-40% reduction in false-labor calls

COMMERCIAL GROWTH

Chief Operating Officer

High ongoing patient engagement boosts delivery package retention (₹1.2L-₹2.5L) and pharmacy spend.

- Retains delivery bookings
- Boosts hospital retail & classes

+25% maternal service engagement

LET'S SHAPE THE FUTURE OF PRENATAL CARE TOGETHER

Schedule a 15-Minute Clinical Demonstration

We will demonstrate the 90-second clinical triage portal, preview your custom hospital-branded desk QR kits, and align on a complimentary 90-day pilot for your flagship units.
